CLEVELAND, OHIO

LIVING ROOM *and* DINING ROOM

Lighting

MAR 18 1940

The wide variety of interior designs in vogue today is the dominant factor in lighting fixture merchandising. A great number of individual tastes, both in design and furnishings, must be met and satisfied. Lighting fixtures, as a result, must be sufficiently diversified to harmonize with almost any interior arrangement. It was with this thought in mind that we planned and

executed the exceptionally broad range of designs presented on the following pages.

For living rooms and dining rooms there are units to match or complement with grace and beauty the numerous variations of standard period designs. There is a wide choice of modern styles to please every taste in this growing field. And there are certain old standbys everyone is familiar with and which, year after year, continue in demand.

Here is a complete line, some units designed primarily for harmonious appearance, some for maximum lighting efficiency, some for both . . . but from them all there is a selective variety to satisfy the most exacting taste.

BEDROOM

Lighting

For many years bedroom lighting was treated largely from the standpoint of utility, rather than the unusually high decorative value it has. To a certain extent, at least, this was the result of a restricted number of designs in bedroom fixtures and the very limited uses to which they could be put.

But popular taste has broadened and now demands sidewall brackets and ceiling fixtures in an increasing variety of styles. Indirect and semi-direct units are getting a rapidly growing call. Here is a line to give you a firm grip on the market for both types in strongly preferred styles.

BATHROOM

Lighting

Straight lines, efficient curves and gleaming surfaces — these are the dominant characteristics of today's bathrooms. But this modern effect is lost unless careful consideration is given the lighting fixtures so as to accentuate rather than detract from the modern scheme.

Here is an opportunity for you to present a complete line of up-to-the-minute designs in every gradation of the modern trend, a line that is bound to please because there is a unit to suit every taste.

OUTDOOR LIGHTING

Every home, old or new, can use additional outdoor lighting. No matter how well-equipped it may have been at the start, new needs develop for light . . . over a doorway, a garage, walk entrances, gardens, pools, etc. The very diversity of uses to which outdoor lighting can be put calls for a wide variety of sizes, types and styles. Thus some of our line of lantern fixtures carry a

strong salt-water, sea-going flavor; others are as smartly modern as tomorrow's headlines; still others are reminiscent of a coach and four, or classically antique in Gothic or Colonial. They run the gamut of materials with frames of copper, brass, bronze, zinc, and enameled steel; glass of pebbled or crackled texture, clear or colored.

With the steady progress of the trend toward living more of the time — leisure time — out of doors, people have come to appreciate and to demand better and more complete outdoor accessories. Adequate, yet decorative, outdoor lighting falls squarely in this category.

A well-rounded line of these fast-moving lanterns opens an avenue to new, year 'round profits.

You'll find, too, it helps in bringing you additional business in many other lines.

Code: Utensil

Packed individually; 6 to case.

Lighting

ACCESSORIES

The numerous miscellaneous items among electrical lighting fixtures make up an accessory list which, with judicious display, can be made to yield real returns. Hangers, holders, beamlights, converters, kitchen fixtures and glassware are in steady demand month in and month out. A well selected stock of these items frequently leads to the building up of a substantial volume in your

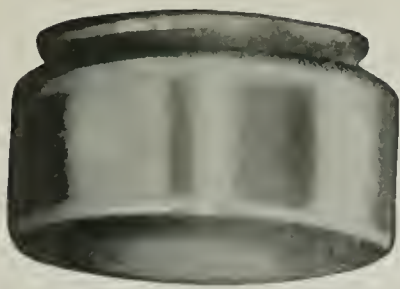

regular line. Replacement items bring customers in and make your first contacts for you.

Every unit in our auxiliary line of accessories is selected because it meets an established demand and is priced to return you a fair profit for handling. The line includes hangers and glassware for commercial installations as well as standard domestic equipment. By this means you have a chance to get in on the ground floor when new commercial equipment is being bought.

The domestic units represent such pronounced and readily appreciated improvements over old style fixtures that the market for them is exceedingly broad among customers who ordinarily would not be interested in the higher priced merchandise. This accessory line rounds out your stock, makes possible many sales that you would miss entirely otherwise.
